

Generally, water impurities are physic (solid) and chemical (NH_4 , NH_3 , etc.)

I have success in water sanitation by *Euchornia crassipes* for drinking about 800 hen layers. Water source are contaminated by feces

Grey-black of water color

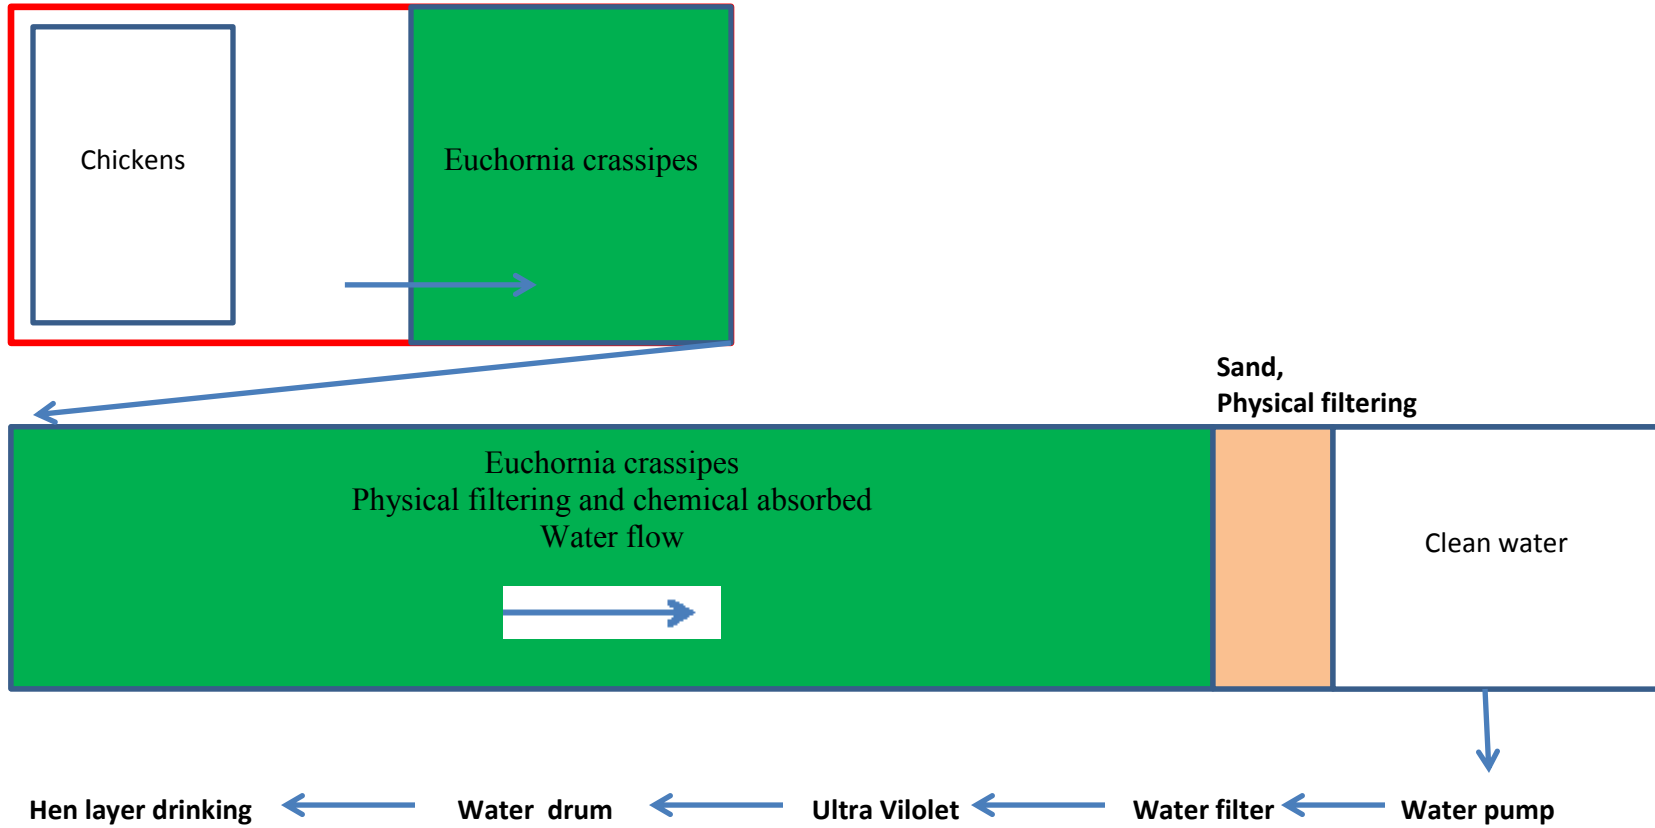

Shown lower of vegetation height, so lower of chemical (NH_4 , NH_3 , etc.) contain

Unfortunately Indonesia so scare to explain their own law to families of ita and sanarkim, I am bankrupt, we cannot detect vegetation effect as chemical reducer

Treatment schema for hen drinking, water source contain hen or chicken feces

Water pool

Excellent also for exotic

Water pump used for cycles and oxygen adding

Much fish feeding, shown no green water (not over of ammonia contain in water). *Euchornia crassipes* used to physical filtering and chemical absorbed
